PRESBYOPIC IOL EXPECTATION FORM ***crystalens™ / ReSTOR® / ReZoom® Lenses***

Loden Vision Centers has explained to me that the purpose of upgrading to a presbyopic IOL is to decrease my dependence on glasses. I have been told that my vision may not be perfect 20/20 at both distances, intermediate and near. No guarantee of 20/20 uncorrected vision has been given or implied.

Initials: _____

Loden Vision Centers has explained to me that to achieve my best potential with my near vision, which it will take a minimum of three (3) months and it may require a second procedure with an Eximer laser or an Intraocular lens to obtain my best uncorrected distance vision. There may be additional charges for these procedures.

Initials: _____

Loden Vision Centers has explained to me that lower power glasses may be needed to see fine print, read a book, perform complex near vision tasks or perform complex computer tasks. In some instances glasses may still be needed for distance and near visual tasks.

Initials: _____

Loden Vision Centers has told me that there is a 20% - 30% chance of needing low power reading glasses 100% of the time for near vision. If my distance vision is 20/25 or better uncorrected with the crystalens™, ReSTOR® or ReZoom® lens, there is an approximately 20% - 30% chance of needing low power reading glasses.

Initials: _____

Loden Vision Centers has explained to me that LASIK or PRK may be needed to enhance my uncorrected vision. This will not occur until at least 3-6 months following my initial surgery. The charge for LASIK or PRK is not included with a cataract surgery presbyopic lens upgrade. **The charge for LASIK or PRK is \$995.00 per eye.**
